Miscellaneous Lighting

Cargo Light

The Feniex Cargo light has proven to be a popular product in our portfolio. Let's talk about what it comes with. For starters, the cargo light is 15 inches long. It comes with an on and off switch and a six inch wire exit. The cargo light is also manufactured with an epoxy making it weather resistant. The light also comes with two screws for a surface mount installation. Looking closely, you'll notice 18 high powered LEDs. Those 18 LEDs consume less than an amp. To activate them, you simply connect power and ground to your red and black wire. The light itself functions from both a 12 to up to 24 volt input to activate the light, it's a simple switch on and off to utilize the light outside of the on and off switch. You can do that by simply connecting the wire to constant trigger source. Perhaps that's a door open or a cargo open if you wish to have the light controlled by the switch, just connect the wires to a constant power such as your vehicle battery, and use a switch every time you act or open that cargo light. There's a lot of applications in which you can install just one cargo light, and that's sufficient for that illumination need. But what we've seen consistently is that these are now installed as pairs. Every cargo light does come with a two year warranty. That concludes all the features and functions that comes with your Feniex cargo light.
