Quantum 2.0

What Comes with the 44”, 49” & 60” Lightbars

There are three different size light bars for the Quantum Series, starting with the 44 inch to the 49, and then the 60 inch. Let's talk about what comes in each one of these packages using the 49 inch light bar as the example. So once again, whether you order the 44 inch, 49, or 60 light bar, every bar is shipped with the five color capable Quantum modules offering you red, white, blue, amber, and green in every single module location. Based on how you configure and order your bar, you'll have access to those colors, every single light bar shipped with two cables, your 15 foot red and black power cable, and your 15 foot 13 mode function cable harness, which comes with your 13 programmable inputs and your two serial wires. One thing to note on the serial wire is that it's pre-installed with the programmable USB module. As a default, every single light bar is shipped with the standard foot mount. The standard foot mount uses the adjustable hook kit, which comes in a host of different options. There are four different bolt sizes available for every single hook kit. Depending on your vehicle make and model, you'll order the custom vehicle hook mount that's used for your car. If height is a mounting problem, then you would order the adjustable mounting foot for that solution. The adjustable foot comes with railings that allow you to higher and lower the bar relative to your mounting location. Also available to order are two permanent mounting brackets. First is your headache bracket. Second is your permanent mounting bracket. Both bracket options come standard with their mounting screws. One additional thing you can order with your light bar is the input expansion module known as the Quantum Converter. It gives you 28 programmable inputs. The reason it's an additional item now is because every harness is shipped with 13 modes. That's 13 individual program modes. If you wish to have more than 13 modes, you would then order your expansion module, which gives you a total of 28. So that concludes what comes with your 44, 49, or 60 inch lightbar. To recap the standard foot mounts, you have available four different mounting options, to compliment that, your two harnesses your power and ground, along with your 13 input modes, your optional expansion module that gives you 28 programmable modes, and of course your five colors that are available in every module location.
