Quantum 2.0

What Comes With the 12”, 18” & 27” Mini Lightbars

The Quantum Family offers three different size mini light bars, starting with the 14 inch to the 18 inch and the 27 inch light bar. We're gonna talk about what comes with these packages, using the 27 inch light bar as our example. Your Quantum mini light bar series all comes standard with three things. First is the mounting hardware, which is a default magnet mount. The second is your cigarette plug with a 15 foot harness with four programmable modes and your USB module that gives you the ability to program both the color configuration and the unlock level. If you're looking for a more permanent installation instead of a magnetic mount, you can purchase a permanent mount bracket separately, which comes standard with its mounting hardware. To mount your permanent bracket, you first have to remove the magnets. Remove the washers that are located in its place and place your bracket on the mini bar. Secure the bracket in place using the four screws and four washers. So again, you have two mounting options. Magnetic mount is a default and you can order the adjustable permanent mount bracket as a secondary option. That concludes what comes standard with your Quantum mini light bars.
