# Quantum 2.0

## What Comes With the Inner Lightbar

The Quantum Interior Light Bar family is manufactured in 13 different types that support over 20 vehicle make and models. Let's talk about this family and what comes with them.
What's in front of me here that's fully built out is the Tahoe 2021 model. Every one of these bars supports a specific vehicle group. Let's take a closer look. Starting from the center here, I have my built out Tahoe, which is built for the year 2021 and above. On the right side, I have the F150 2015+, the Ram 2015+, the Tahoe 2015 to 2020, The Silverado 19+, the Durango 2015+, the Explorer 2020+, the RAM 2019+, the Expedition 2018+, the Universal model, the Charger 2011+, the Explorer 2011+, and the only rear model that we manufacture, which is for the Dodge Charger 2011+. Every interior light bar family comes with a 14 pin, eight foot harness, two wires for power and ground, two wires for your USB module and 10 programmable modes. Every bar also comes with its respective mounting hardware on, the Tahoe 2021+ it's a full bracket model. However, on all the other vehicle types, each one comes with two brackets on both the passenger and the driver's side. On every interior light bar, it comes with a rubber trim that gives you roughly half an inch of adjustability. That half an inch is helpful when closing the gap on that flashback that occurs from the interior light bar. The universal bar itself is more flat so that it can support a whole host of different vehicles, and it comes with a one inch slip that helps prevent flashback. When it comes to mounting the universal, it comes with an X, Y, and Z adjustability for height, left, right, and forward and backward adjustment.
