Quantum 2.0

What Comes with the Split and Full Arrow Bar

The Quantum family offers two arrow sticks: the split version, and the full version. Let's talk about what those come with.
Both the split version and the full version come with the wire harness with 10 programmable modes. The programmable modes can be programmed using the Quantum software program.To do so, you'll use the USB module and plug that into your computer. We'll talk about that in the next video. Both versions come standard with the mounting holes located on the lightboard itself. Your split version is a standalone arrow board. You'd have to buy two of them to get the full arrow board functionality. That concludes what comes standard with your two arrow sticks.
