Q Series

How to Program Q Series Warning Flash Patterns

Programming flash patterns on the Q Series is the same way we've been doing it for years. I'm gonna show you how that's done. Again, regardless of what Q product you're programming, the process is still the same. I'm gonna use 2 Flat Q series modules as my example here. Every Q series comes with 3 modes, red, yellow, and white to change flash patterns. First, apply power to the mode wire you wish to program, and then you use your pattern selector switch, which is the blue wire. Tap that to ground hold for half a second. Every time you tap the blue wire to ground, it'll cycle to the next flash pattern. Repeat that same process on your next mode. So that's how you activate flash patterns on all Q Series products. In the other videos, we will talk about phasing and alternating patterns.
